

GARSAME MOHAMUD IFTIN v3

Software Engineer · Full-Stack Developer

Mogadishu, Somalia | +252 616 172 443 | garsame40@gmail.com | garsame.com | github.com/Garsame | linkedin.com/in/garsame-mohamud-iftin

// PROFILE

Full-stack developer who designs, builds and ships production systems end to end — database, backend, frontend and deployment. Since 2024 I have put five platforms into live use across Somalia and East Africa, including a multi-tenant school management SaaS, an AI job-matching platform and an AI pipeline that turns recorded lectures into Somali study notes. BSc Computer Science from Hormuud University, with peer-reviewed research on Somali-language AI presented at HUMC 2026. I build for the conditions software here actually runs in: weak networks, low-end phones and mobile-money payments.

// EXPERIENCE

Independent Full-Stack Developer 2024 — PRESENT

Self-directed · Mogadishu, Somalia

- Built and deployed five production web platforms, each taken from first conversation through database design, backend, interface, hosting and ongoing maintenance.
- Designed a multi-tenant SaaS architecture with per-tenant and per-branch data isolation, role-aware permissions and tiered subscription limits, now serving schools in Somalia, Djibouti and Ethiopia.
- Integrated AI into working products rather than demos — transcription, translation, document generation and candidate-to-vacancy matching, evaluated with real users.
- Deploy and operate on Ubuntu VPS infrastructure with Nginx, process management, domains and TLS; responsible for uptime after launch.
- Scope and cut features deliberately for local conditions — intermittent connectivity, low-end devices and mobile-money payment flows.

Technology Pioneer — National Training Week 2026

Hormuud University · Mogadishu, Somalia

- Selected as one of six developers to build the registration and management platform for the national training programme.
- Delivered participant registration, session management and verified certificate issuance for an intensive online technical training programme.

// EDUCATION

BSc Computer Science GRADUATED JULY 2026

Hormuud University · Mogadishu, Somalia

// RESEARCH

HUMC 2026 — Conference Paper 2026

Presented *A Unified AI Platform for Somali Lecture Transcription, Translation and Note Generation* at the Hormuud University Multidisciplinary Conference. Evaluated with participants across seven dimensions: usability 4.57/5, educational value 5.00/5, overall 4.29/5.

// TECHNICAL SKILLS

LANGUAGES

TypeScript · JavaScript · Python · Dart · SQL · HTML · CSS

FRONTEND

Next.js · React · Tailwind CSS · Flutter · Responsive & mobile-first design

BACKEND

FastAPI · Node.js · Express · REST APIs · Celery · Authentication & RBAC

DATA

PostgreSQL · MongoDB · Redis · Schema design · Multi-tenant data isolation

AI & ML IN PRODUCTION

OpenAI Whisper · Google Gemini · Azure Cognitive Services · Prompt design · Somali-language NLP

INFRASTRUCTURE

Ubuntu VPS · Nginx · PM2 · Domains & TLS · Git · GitHub

INTEGRATIONS

Mobile money · SMS & OTP providers · SMTP e-mail · Real-time messaging

// LANGUAGES

Somali	NATIVE
English	FLUENT
Arabic	READING & WRITING

// SELECTED WORK

- 01 MadrasaHub — school management SaaS
 - 02 Baro Platform — AI Somali study notes
 - 03 JobAssistAI — AI job matching
 - 04 MGB — student transport platform
 - 05 National Training Week platform
- Full detail [overleaf](#) →

Five systems, all live and in use. Each was designed, built and deployed by me, and each is running in production today.

/ 001 **MadrasaHub — School Management Platform** LIVE

kingsschools.onepercenttech.com

A multi-tenant SaaS that runs the full school day from one system, serving institutions across Somalia, Djibouti and Ethiopia. Admissions and student records, multi-branch management that preserves transfer and enrollment history, fees with invoices and receipts, attendance and timetables, marks and year-on-year progression, and role-aware access that protects tenant, branch and student boundaries. Schools register publicly, are approved and assigned a plan by the platform owner, then set up their own branches, classes, subjects, timetables and exams. Tiered subscriptions enforce per-plan limits on branches, students, users and storage.

Multi-tenancy · role-based access control · subscription plans · academic year history

/ 002 **Baro Platform — AI Somali Lecture Notes** RESEARCH

Final year project · presented at HUMC 2026

A platform that takes a recorded lecture and returns clean study notes in Somali — a language most systems do not serve at all. The pipeline downloads and extracts audio, transcribes it, generates structured Somali notes, and produces spoken audio of the result. Background processing keeps long jobs off the request cycle. Evaluated with participants across seven dimensions, scoring 4.57/5 on usability, 5.00/5 on time saved and 4.29/5 overall. A condensed version was presented at the Hormuud University Multidisciplinary Conference 2026.

Next.js · FastAPI · Celery · OpenAI Whisper · Google Gemini · Azure Cognitive Services · PostgreSQL

/ 003 **JobAssistAI — AI Job Matching for Somalia** LIVE

jobassistai.garsame.com

A hiring platform that connects job seekers with real vacancies in the Somali market. Candidates build a profile once, and a matching engine scores them against open positions so they apply to the roles that actually fit instead of searching blindly. Built to reduce the time between a vacancy appearing and the right person applying for it.

AI candidate–vacancy matching · profile scoring · rapid application flow

/ 004 **MGB — Student Transport Platform** LIVE

mgbadbaado.com

The platform for Midowga Gawaarida Badbaado, a student-run bus union founded in 2024 that provides affordable university transport. Handles member registration, route and stop information, four monthly pricing tiers based on how many days a week a student travels, committee and contact structure, and the rules of conduct members agree to. Built in Somali for the students who use it every morning.

Member registration · route and schedule management · tiered subscription pricing · Somali-language interface

/ 005 **National Training Week Platform** LIVE

ntw.hu.edu.so · [Hormuud University](https://hormuud.edu.so)

The registration and management system for National Training Week, an intensive online technical training programme delivered by industry experts. Handles participant sign-up and accounts, session and schedule management, and issuance of verified certificates on completion. Built as one of six developers selected as Technology Pioneers for the programme.

Participant registration · session management · verified certificate issuance
